1. Image Prompts (30 shots)

30 shots cover the full script, about 18 seconds each. Every prompt works on its own.

Shot 1 (0:00–0:25, ~26s)

[Script Segment] "Nearly five thousand years separate a dented cap of hammered copper from the helmet soldiers wear today. Every era added something new. A tougher metal. A smarter shape. A better way to soak up a blow. And every one of those changes happened for the same reason. The helmet before it had let something through. To follow that path, our team spent months digging through records and rebuilding each helmet in 3D, piece by piece."

> **Image Prompt:** A long dark worn wooden table holds a chronological row of helmets fading into darkness: a dented hammered-copper Sumerian helmet, a bronze Corinthian helmet, an iron Roman helmet, a medieval great helm, a WWI steel helmet and a modern matte-tan composite combat helmet with a night-vision mount, each in its own soft pool of light, the copper helmet sharp in the foreground, the modern helmet sharp at the far end. Camera: low side angle along the table, deep perspective, shallow depth of field. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: epic, reverent, museum-like. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low side angle along the table, deep perspective, shallow depth of field
- **Lighting:** narrow overhead spotlight forming a pool of light on the table, everything else falling into black
- **Mood:** epic, reverent, museum-like
- **Action:** the copper helmet sharp in the foreground, the modern helmet sharp at the far end

Shot 2 (0:25–0:52, ~27s)

[Script Segment] "It starts in ancient Mesopotamia, around 2500 BC. Sumerian soldiers marching in tight formations wore helmets of beaten copper over padded leather caps. The idea was simple. Put something hard between the skull and the weapon. For rulers, the same idea became a symbol. One Sumerian ruler was buried with a helmet of solid gold, shaped to imitate hair tied up in a knot. It was never meant to be hit. It was meant to be seen."

> **Image Prompt:** A dim ancient Sumerian tomb chamber of mud brick around 2500 BC: a hammered-copper soldier's helmet over a padded leather cap rests on a low ledge, and beyond it a golden ceremonial helmet engraved with wavy hair and a tied knot sits half-buried in dry earth, a single shaft of dusty light falling on the gold, the copper helmet in soft focus in the foreground, the gold helmet glowing in the light shaft. Camera: low-angle medium shot, shallow depth of field. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: ancient, sacred, mysterious. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low-angle medium shot, shallow depth of field
- **Lighting:** soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow
- **Mood:** ancient, sacred, mysterious
- **Action:** the copper helmet in soft focus in the foreground, the gold helmet glowing in the light shaft

Shot 3 (0:52–1:15, ~23s)

[Script Segment] "But copper had a weakness. It was soft. A heavy strike could dent it deep enough to injure the man beneath it. The answer arrived with the Bronze Age. By mixing copper with a small amount of tin, metalworkers created an alloy far harder than either metal alone. Bronze held its shape, resisted cutting, and could be polished to a shine that unsettled anyone facing it."

> **Image Prompt:** A dark ancient workshop: on the left a copper helmet with a deep fresh dent in its crown, on the right a glowing clay crucible of molten bronze with reddish copper nuggets and silvery tin ingots beside it, and a freshly polished golden-brown bronze helmet catching the firelight, sparks rising from the crucible. Camera: high 3/4 angle tabletop medium shot. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: transformative, discovery. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** high 3/4 angle tabletop medium shot
- **Lighting:** warm flickering orange glow from a forge or flame mixed with cold grey ambient fill
- **Mood:** transformative, discovery
- **Action:** sparks rising from the crucible

Shot 4 (1:15–1:29, ~14s)

[Script Segment] "By the 7th century BC, Greek armorers had pushed bronze to its limit. They created the Corinthian helmet. Hammered from a single sheet of metal, it wrapped the entire head and face, leaving only narrow openings for the eyes and mouth."

> **Image Prompt:** A gleaming bronze Greek Corinthian helmet from the 7th century BC with almond-shaped eye openings, a long nose guard and a narrow mouth gap, standing on a dark wooden stand in a dim armorer's workshop, the helmet emerging from darkness. Camera: eye-level frontal medium close-up. Lighting: single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges. Mood: iconic, heroic. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** eye-level frontal medium close-up
- **Lighting:** single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges
- **Mood:** iconic, heroic
- **Action:** the helmet emerging from darkness

Shot 5 (1:29–1:43, ~14s)

[Script Segment] "Making one took enormous skill. The smith had to stretch the bronze thin enough to wear, yet keep it thick across the brow and crown, where blows landed most. A single mistake could tear the sheet and ruin weeks of work."

> **Image Prompt:** An ancient Greek armorer's anvil in a dark workshop: a half-finished bronze Corinthian helmet shell on a curved anvil horn, small hammers and stakes around it, and beside it a torn, split bronze sheet ruined by a single mistake, hammer marks and the jagged tear visible in the metal. Camera: low side close-up. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: painstaking craft, fragile. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint

> atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low side close-up
- **Lighting:** warm flickering orange glow from a forge or flame mixed with cold grey ambient fill
- **Mood:** painstaking craft, fragile
- **Action:** hammer marks and the jagged tear visible in the metal

Shot 6 (1:43–2:01, ~18s)

[Script Segment] "It was superb protection. And that was exactly the problem. A soldier inside a Corinthian helmet could barely hear orders and could see almost nothing to his sides. So over the next few centuries, Greek designs slowly opened up. Cheek pieces became hinged. Ear openings appeared. Protection was traded for awareness."

> **Image Prompt:** First-person view from inside a bronze Corinthian helmet, looking out through its narrow eye slits at a blurred dusty ancient Greek battlefield of spears, the frame edges blocked by dark bronze, only a narrow strip of the battlefield visible. Camera: first-person point of view through the eye slits. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: claustrophobic, isolated. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** first-person point of view through the eye slits
- **Lighting:** soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow
- **Mood:** claustrophobic, isolated
- **Action:** only a narrow strip of the battlefield visible

Shot 7 (2:01–2:22, ~21s)

[Script Segment] "Then came Rome. And Rome faced a different problem entirely. Scale. Hand-shaping a full-face helmet took a skilled craftsman days of work. Rome needed to equip hundreds of thousands of men. So its legions adopted a simpler design borrowed from the Celts, the Montefortino. A plain rounded bowl with a small neck guard and cheek pieces. Fast to make. Easy to repair."

> **Image Prompt:** A vast dark stone Roman armory with endless rows of identical plain bronze Montefortino helmets with top knobs, small neck guards and cheek pieces, lined up on wooden racks into the darkness, one helmet sharp in the foreground, the rows fading behind. Camera: low-angle one-point perspective down the central aisle. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: imperial, massive scale. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low-angle one-point perspective down the central aisle
- **Lighting:** narrow overhead spotlight forming a pool of light on the table, everything else falling into black
- **Mood:** imperial, massive scale
- **Action:** one helmet sharp in the foreground, the rows fading behind

Shot 8 (2:22–2:30, ~8s)

[Script Segment] "These helmets were handed down from soldier to soldier, and some survive today with several different owners' names punched into the metal."

> **Image Prompt:** Extreme close-up of the neck guard of a worn ancient bronze Roman Montefortino helmet, rows of dotted punched Latin letters from several different owners, green patina in the grooves, the punched letters in razor-sharp focus. Camera: macro close-up, razor-thin depth of field. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: personal, haunting. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** macro close-up, razor-thin depth of field
- **Lighting:** low raking side light from the right, long soft shadows, specular glints along edges
- **Mood:** personal, haunting
- **Action:** the punched letters in razor-sharp focus

Shot 9 (2:30–2:45, ~15s)

[Script Segment] "Over time, Roman workshops shifted from bronze to iron. Iron was cheaper and far more plentiful. And with it came the Imperial Gallic helmet, with a reinforced brow ridge to stop downward blows and a wide flared guard protecting the back of the neck."

> **Image Prompt:** A polished iron Roman Imperial Gallic helmet with brass decorations, a reinforced brow ridge across the front and a wide flared neck guard, on a dark stand beside a forge bench with glowing coals and a duller bronze helmet behind it, the iron helmet catching a rim of firelight. Camera: low-angle 3/4 medium close-up. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: powerful, imperial. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low-angle 3/4 medium close-up
- **Lighting:** warm flickering orange glow from a forge or flame mixed with cold grey ambient fill
- **Mood:** powerful, imperial
- **Action:** the iron helmet catching a rim of firelight

Shot 10 (2:45–3:07, ~22s)

[Script Segment] "When the Western Empire collapsed, so did its workshops. Without large-scale industry, smiths turned to a design that needed less skill, the spangenhelm. Instead of one solid bowl, it used a frame of iron strips with plates riveted between them. It was easy to build. But every seam was a weak point. A hard enough blow could split a joint and drive straight through."

> **Image Prompt:** An abandoned Roman armory in ruins with collapsed roof beams and dust, and in the foreground on a broken bench an early medieval spangenhelm: a frame of iron strips with riveted plates, one seam burst open, a plate bent inward and broken rivets scattered beside it, pale light falling through the broken roof onto the damaged seam. Camera: high 3/4 angle medium close-up. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: decline, fragile, grim. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** high 3/4 angle medium close-up
- **Lighting:** soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow

- **Mood:** decline, fragile, grim
- **Action:** pale light falling through the broken roof onto the damaged seam

Shot 11 (3:07–3:28, ~21s)

[Script Segment] "By the 11th century, smiths had relearned how to raise a helmet from a single piece of iron. The result was the Norman nasal helmet. A conical shell that deflected blows, with one narrow bar running down over the nose. Yet the rest of the face remained completely exposed. And on medieval battlefields, arrows and blades went looking for exactly that."

> **Image Prompt:** A conical Norman nasal helmet from the 11th century, raised from a single piece of iron with one narrow bar running down over the nose, on a featureless matte-grey display mannequin head in a dark medieval forge, bodkin arrows stuck in muddy ground beside it, the bare face area of the mannequin left exposed around the nose bar. Camera: eye-level 3/4 close-up. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: austere, vulnerable. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** eye-level 3/4 close-up
- **Lighting:** warm flickering orange glow from a forge or flame mixed with cold grey ambient fill
- **Mood:** austere, vulnerable
- **Action:** the bare face area of the mannequin left exposed around the nose bar

Shot 12 (3:28–3:46, ~19s)

[Script Segment] "So armorers decided to cover everything. In the late 12th century, the great helm appeared. A flat-topped steel cylinder that enclosed the entire head. For the first time since the Greeks, a soldier's face vanished behind metal. Knights began painting coats of arms on their shields and surcoats, simply so they could be recognized."

> **Image Prompt:** A flat-topped steel medieval great helm from the late 12th century with narrow eye slits and breathing holes on a dark stand, and behind it a row of heater shields with distinct painted heraldic coats of arms leaning against a dark stone wall, the great helm sharp, the painted shields softly lit behind. Camera: low-angle frontal medium close-up. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: imposing, pageantry. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low-angle frontal medium close-up
- **Lighting:** narrow overhead spotlight forming a pool of light on the table, everything else falling into black
- **Mood:** imposing, pageantry
- **Action:** the great helm sharp, the painted shields softly lit behind

Shot 13 (3:46–4:03, ~17s)

[Script Segment] "But the flat top had a fatal flaw. It met every overhead strike head-on, absorbing the full force instead of turning it aside. So armorers raised the crown into a point. This was the sugarloaf helm, and it did what flat steel could not. It made blades slide off."

> **Image Prompt:** Two medieval helmets on a dark table: a flat-topped great helm with a dent in its crown and a pointed sugarloaf helm, a heavy sword blade glancing off the sugarloaf's pointed crown with a

> streak of sparks trailing along the curve, sparks frozen mid-air along the pointed crown. Camera: low side angle close-up. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: tense, then satisfying. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low side angle close-up
- **Lighting:** low raking side light from the right, long soft shadows, specular glints along edges
- **Mood:** tense, then satisfying
- **Action:** sparks frozen mid-air along the pointed crown

Shot 14 (4:03–4:18, ~15s)

[Script Segment] "Underneath all that steel, knights wore something just as important. A padded arming cap and a hood of mail. The metal stopped the edge. The padding softened the shock. It was a lesson armies would forget, and then have to learn all over again."

> **Image Prompt:** A cutaway cross-section on a dark table of a medieval great helm worn over a chainmail coif and a quilted linen arming cap on a featureless matte-grey mannequin head, every mail ring and stitch visible, a modern helmet foam pad resting beside it in the same pool of light, the layers clearly separated in the cut. Camera: side-on cutaway close-up. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: insightful, full-circle. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** side-on cutaway close-up
- **Lighting:** low raking side light from the right, long soft shadows, specular glints along edges
- **Mood:** insightful, full-circle
- **Action:** the layers clearly separated in the cut

Shot 15 (4:18–4:41, ~22s)

[Script Segment] "Vision and airflow were still a struggle. In the 14th century, the bascinet introduced a clever fix. A visor mounted on pivots. Raise it to breathe and look around. Lower it when the arrows started flying. Some visors were drawn out into a sharp point, earning the nickname hounskull, or dog's face. That beak shape gave lances and arrows nothing flat to bite into."

> **Image Prompt:** A 14th-century steel hounskull bascinet with a long pointed beak-shaped visor full of breathing holes on a dark stand, the visor mounted on side pivot pins, blurred arrows streaking through the dark background, the visor half raised on its pivots. Camera: eye-level 3/4 close-up. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: clever, menacing. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** eye-level 3/4 close-up
- **Lighting:** soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow
- **Mood:** clever, menacing
- **Action:** the visor half raised on its pivots

Shot 16 (4:41–5:06, ~26s)

[Script Segment] "By the 1400s, helmets like the armet fitted the head so closely that they moved with the wearer. Medieval head protection had reached its peak. Then, gunpowder arrived on the battlefield. As firearms grew more powerful, armor thick enough to stop a musket ball became too heavy to fight in. Little by little, soldiers abandoned it. By the 18th century, most infantry marched into battle wearing felt, cloth, and leather. Helmets survived mostly as decoration."

> **Image Prompt:** A dark museum gallery: a polished 15th-century steel armet helmet with close-fitting cheek plates on a pedestal in a single spotlight, and on the table in front of it a flintlock musket, a powder horn, a small pile of black gunpowder and a flattened lead musket ball, the armet gleaming, the musket in the foreground. Camera: low-angle medium shot, foreground objects slightly out of focus. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: peak, then ominous turn. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low-angle medium shot, foreground objects slightly out of focus
- **Lighting:** narrow overhead spotlight forming a pool of light on the table, everything else falling into black
- **Mood:** peak, then ominous turn
- **Action:** the armet gleaming, the musket in the foreground

Shot 17 (5:06–5:27, ~21s)

[Script Segment] "There were exceptions. Heavy cavalry, like Napoleon's cuirassiers, kept their steel helmets and breastplates well into the 1800s. But for the common foot soldier, the helmet had all but disappeared. Prussia's famous spiked Pickelhaube of 1842 was made of hardened leather. It looked impressive, but it offered almost no protection. For nearly two hundred years, that seemed acceptable. Until 1914."

> **Image Prompt:** A dark table with a Napoleonic French cuirassier steel helmet with brass crest and horsehair mane, a simple cloth infantry cap, and a black leather Prussian Pickelhaube with brass spike and eagle plate, with a brass WWI artillery shell standing upright at the end of the row in a harsh spotlight, each object in its own pool of light. Camera: low side angle along the row. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: proud, then ominous. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low side angle along the row
- **Lighting:** narrow overhead spotlight forming a pool of light on the table, everything else falling into black
- **Mood:** proud, then ominous
- **Action:** each object in its own pool of light

Shot 18 (5:27–5:42, ~15s)

[Script Segment] "The First World War was dominated by artillery. Shells burst above the trenches, raining hot metal fragments down on the men below. A soldier only had to raise his head above the parapet to be struck. And most of them were wearing fabric caps."

> **Image Prompt:** An empty WWI trench at night under an exploding airburst artillery shell, glowing jagged metal fragments raining down onto wet sandbags, a soft wool cloth cap lying in the mud below

> the parapet, barbed wire silhouettes beyond, fragments frozen mid-fall. Camera: low angle from inside the trench looking up. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: terrifying, vulnerable. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low angle from inside the trench looking up
- **Lighting:** warm flickering orange glow from a forge or flame mixed with cold grey ambient fill
- **Mood:** terrifying, vulnerable
- **Action:** fragments frozen mid-fall

Shot 19 (5:42–6:06, ~24s)

[Script Segment] "France reacted first. Its soldiers began receiving steel skullcaps to wear underneath their kepis. Within months, the army introduced a full steel helmet, the Adrian. Britain followed with the Brodie helmet. Its design was brilliant in its simplicity. It was pressed from a single sheet of manganese steel, a process fast enough to produce millions. Its wide, shallow brim shielded the head and shoulders from fragments falling from above."

> **Image Prompt:** A dark industrial workshop: a horizon-blue French Adrian helmet with its crest ridge and a khaki British Brodie helmet with a wide flat brim on a workbench, behind them a steel press stamping a flat sheet into a Brodie shape with sparks and steam, and a line of identical Brodie helmets fading into the dark, sparks bursting from the press. Camera: low side medium shot. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: industrial, urgent. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low side medium shot
- **Lighting:** warm flickering orange glow from a forge or flame mixed with cold grey ambient fill
- **Mood:** industrial, urgent
- **Action:** sparks bursting from the press

Shot 20 (6:06–6:20, ~13s)

[Script Segment] "Germany went further. In 1916, it introduced the Stahlhelm. Made of nickel steel, its deep shape extended down over the ears and the back of the neck. It became one of the most recognizable silhouettes of the twentieth century."

> **Image Prompt:** A field-grey German M1916 Stahlhelm on a dark stand, its deep skirt flaring down over the ears and the back of the neck, against a softly glowing grey haze, the helmet half in silhouette. Camera: eye-level side profile close-up. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: iconic, haunting. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** eye-level side profile close-up
- **Lighting:** soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow
- **Mood:** iconic, haunting
- **Action:** the helmet half in silhouette

Shot 21 (6:20–6:35, ~15s)

[Script Segment] "Germany even tried to add an extra steel plate that hung from lugs on the front, meant to stop bullets at the brow. It worked, but it was so heavy that few soldiers wore it for long. Once again, protection had collided with weight."

> **Image Prompt:** A German Stahlhelm with a thick extra steel brow plate hooked onto its front lugs, a flattened bullet stuck in the plate, sitting on a rusted antique balance scale that tips heavily to one side, a medieval great helm softly blurred behind, the scale tipped low under the weight. Camera: eye-level medium close-up. Lighting: single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges. Mood: burdensome, history repeating. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** eye-level medium close-up
- **Lighting:** single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges
- **Mood:** burdensome, history repeating
- **Action:** the scale tipped low under the weight

Shot 22 (6:35–6:46, ~12s)

[Script Segment] "Steel helmets sharply reduced fatal head wounds. But they still had a hidden problem. When a fragment hit, the shell pressed directly against the skull, passing much of the impact straight into the wearer."

> **Image Prompt:** A cutaway cross-section of a WWI steel helmet on a featureless matte-grey mannequin head, the thin liner pressed tight against the shell, a fragment impact denting the steel straight inward with faint glowing shockwave lines travelling into the head, the dent and shockwave frozen at impact. Camera: side-on cutaway close-up. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: tense, technical. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** side-on cutaway close-up
- **Lighting:** low raking side light from the right, long soft shadows, specular glints along edges
- **Mood:** tense, technical
- **Action:** the dent and shockwave frozen at impact

Shot 23 (6:46–7:05, ~19s)

[Script Segment] "In 1941, the United States answered this with the M1 helmet. It used two separate parts. An outer steel shell, and a lighter liner inside it with an adjustable web of straps. That gap between steel and skull became a crumple zone. The shell could take a dent without the dent reaching the head."

> **Image Prompt:** A cutaway cross-section of an olive-drab US M1 helmet on a featureless matte-grey mannequin head, showing the outer steel shell, the separate inner liner and the cotton webbing straps holding a clear gap between steel and head, the gap glowing faintly. Camera: side-on cutaway close-up. Lighting: single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges. Mood: clever, relieved. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric

> haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** side-on cutaway close-up
- **Lighting:** single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges
- **Mood:** clever, relieved
- **Action:** the gap glowing faintly

Shot 24 (7:05–7:26, ~21s)

[Script Segment] "Soldiers nicknamed it the steel pot, and they used it as far more than armor. It became a wash basin, a shovel, a seat, and even a cooking pot over an open fire. The M1 served for more than forty years. But steel had reached its limit. To make it stronger, you had to make it thicker. And thicker meant heavier."

> **Image Prompt:** A dented olive-drab M1 helmet hanging over a small campfire at night with steam rising from water inside, a folding shovel, a canteen and a shaving brush on a wooden crate beside it, and a worn scratched M1 with faded paint on a dark shelf in the background, embers drifting, steam curling. Camera: low-angle close-up. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: human, warm, end of an era. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low-angle close-up
- **Lighting:** warm flickering orange glow from a forge or flame mixed with cold grey ambient fill
- **Mood:** human, warm, end of an era
- **Action:** embers drifting, steam curling

Shot 25 (7:26–7:36, ~10s)

[Script Segment] "The breakthrough came from a laboratory. In 1965, DuPont chemist Stephanie Kwolek discovered a synthetic fiber that, weight for weight, was five times stronger than steel. It was called Kevlar."

> **Image Prompt:** A dim 1960s chemistry laboratory bench with glass beakers and flasks under a single desk lamp, a thin golden synthetic fiber being drawn up out of a beaker of cloudy liquid, a spool of tightly woven golden-yellow Kevlar fabric beside it, the golden fiber catching the lamp light. Camera: macro close-up. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: breakthrough, discovery. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** macro close-up
- **Lighting:** narrow overhead spotlight forming a pool of light on the table, everything else falling into black
- **Mood:** breakthrough, discovery
- **Action:** the golden fiber catching the lamp light

Shot 26 (7:36–7:54, ~18s)

[Script Segment] "In the early 1980s, the US Army adopted the PASGT helmet, built from layers of Kevlar bonded together with resin. Instead of resisting a fragment with hard metal, its fibers stretched

and caught it, spreading the energy across the entire shell. For roughly the same weight as steel, it stopped far more."

> **Image Prompt:** A woodland-camouflage US PASGT helmet on a dark stand beside an exploded view of golden Kevlar fabric layers fusing together with glossy resin, a jagged metal fragment caught in the stretched woven fibers like a net, energy ripples glowing across the layers. Camera: side-on medium close-up. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: engineered, impressive. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** side-on medium close-up
- **Lighting:** low raking side light from the right, long soft shadows, specular glints along edges
- **Mood:** engineered, impressive
- **Action:** energy ripples glowing across the layers

Shot 27 (7:54–8:09, ~14s)

[Script Segment] "Its shape looked familiar. The deep sides covering the ears and neck echoed the German Stahlhelm so closely that American troops nicknamed it the Fritz. Nearly seventy years later, the best answer to falling fragments still looked like a design from 1916."

> **Image Prompt:** A field-grey 1916 German Stahlhelm and a 1980s US PASGT helmet facing the same way side by side on a long dark table, in exact side profile, their silhouettes nearly identical, dust drifting between them, both rimmed by backlight. Camera: eye-level side profile shot. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: surprising echo, reflective. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** eye-level side profile shot
- **Lighting:** soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow
- **Mood:** surprising echo, reflective
- **Action:** both rimmed by backlight

Shot 28 (8:09–8:32, ~23s)

[Script Segment] "But modern wars revealed a new threat. In Iraq and Afghanistan, many head injuries came not from penetration, but from blast and blunt force. The old strap suspension wasn't enough. The answer was padding. Newer helmets replaced the web of straps with shock-absorbing foam pads, spreading every impact across the skull. Their edges were cut higher around the ears, leaving room for radios and hearing protection."

> **Image Prompt:** A modern high-cut desert-tan combat helmet resting on sandbags at dusk in an arid landscape, beside a cutaway of it on a featureless matte-grey mannequin head showing shock-absorbing foam pads inside and a tactical over-ear headset fitted below the raised edges, faint dust in the air. Camera: low-angle 3/4 close-up. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: harsh, then reassuring. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low-angle 3/4 close-up

- **Lighting:** soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow
- **Mood:** harsh, then reassuring
- **Action:** faint dust in the air

Shot 29 (8:32–8:44, ~12s)

[Script Segment] "Then materials moved forward again. Ultra-high molecular weight polyethylene, a plastic so light it floats on water, yet in layered form even stronger than Kevlar. Helmets made from it are lighter, and they stop even more."

> **Image Prompt:** A thin white ultra-high molecular weight polyethylene composite plate floating on the dark water of a glass tank under a single lamp, a sleek matte-grey modern polyethylene combat helmet resting on dark wood behind it, gentle ripples around the floating plate. Camera: low side close-up at water level. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: surprising, advanced. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low side close-up at water level
- **Lighting:** narrow overhead spotlight forming a pool of light on the table, everything else falling into black
- **Mood:** surprising, advanced
- **Action:** gentle ripples around the floating plate

Shot 30 (8:44–9:10, ~26s)

[Script Segment] "Today's combat helmet carries rails, night vision mounts, communication systems, and sensors. It looks nothing like a copper cap from ancient Sumer. From copper to bronze, bronze to iron, iron to steel, and steel to fiber, each step began with a wound the last helmet couldn't prevent. But the logic behind it has never changed. Every curve, every layer, and every pad is there because, at some point in history, a helmet without it failed."

> **Image Prompt:** A long dark table holding the full chronological lineup of helmets from a dented copper Sumerian cap, a bronze Corinthian, an iron Roman helmet, a split spangenhelm, a great helm and a WWI steel helmet to a fully equipped modern combat helmet with rails, night-vision mount and headset at the near end, each lit by its own light, the modern helmet sharp and brightly rim-lit in the foreground. Camera: low-angle wide shot down the table, deep perspective. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: epic, resolved, haunting. Visual style: Dark Archive Macro, a photoreal 3D CGI render in a museum-artifact still-life look, desaturated palette of charcoal, graphite, worn brown wood, aged steel and dull bronze with warm brass accents, slight cool green-grey in the shadows, faint atmospheric haze, crisp specular highlights, extremely high surface detail (scratches, tool marks, oxidation, wood grain), deep dark negative space, no people, no text, no watermark, 16:9.

- **Camera Angle:** low-angle wide shot down the table, deep perspective
- **Lighting:** narrow overhead spotlight forming a pool of light on the table, everything else falling into black
- **Mood:** epic, resolved, haunting
- **Action:** the modern helmet sharp and brightly rim-lit in the foreground

2. Video Prompts for Google Flow (81 clips of 8 seconds)

Google Flow makes 8-second clips, so each of the 30 shots is split into 8-second clips that follow the narration.

- **Clip 1 of each shot:** use Frames to Video, upload that shot's image as the first frame, and paste the Clip 1 prompt.
- **Clip 2, 3, 4:** add the clip to Scenebuilder and use Extend, which continues from the last frame of the previous clip, then paste the next prompt. If Extend isn't available, use Frames to Video again with the same shot image and the next prompt.
- **Sound:** mute the clips in your editor. Your voiceover replaces the audio.
- **Fitting the voiceover:** some clips cover 4–7 seconds of narration and some about 9. Trim the extra, or slow a clip slightly to cover the gap.

Shot 1 (0:00, ~26s, 4 clips)

Shot 1, Clip 1 of 4 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "Nearly five thousand years separate a dented cap of hammered copper from the helmet soldiers wear today."

> **Video Prompt:** 8-second shot. Scene: A long dark worn wooden table holds a chronological row of helmets fading into darkness: a dented hammered-copper Sumerian helmet, a bronze Corinthian helmet, an iron Roman helmet, a medieval great helm, a WWI steel helmet and a modern matte-tan composite combat helmet with a night-vision mount, each in its own soft pool of light. Camera and motion: Slow push-in on the dented copper helmet at the near end of the table, then a gentle rack focus down the row toward the modern helmet at the far end. Ambient: fine dust motes float slowly through the pools of light. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: epic, reverent, museum-like. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 1, Clip 2 of 4 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "Every era added something new. A tougher metal. A smarter shape. A better way to soak up a blow."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A long dark worn wooden table holds a chronological row of helmets fading into darkness: a dented hammered-copper Sumerian helmet, a bronze Corinthian helmet, an iron Roman helmet, a medieval great helm, a WWI steel helmet and a modern matte-tan composite combat helmet with a night-vision mount, each in its own soft pool of light. Camera and motion: Slow lateral slide along the row past the bronze Corinthian and iron Roman helmets, each pool of light brightening softly as the camera passes. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 1, Clip 3 of 4 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "And every one of those changes happened for the same reason. The helmet before it had let something through."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A long dark worn wooden table holds a chronological row of helmets fading into darkness: a dented hammered-copper Sumerian helmet, a bronze Corinthian helmet, an iron Roman helmet, a medieval great helm, a WWI steel helmet and a modern matte-tan composite combat helmet with a night-vision mount, each in its own soft pool of light. Camera and motion: Continue the slide past the great helm and the WWI steel helmet, then ease in close on a dent in the WWI helmet's surface. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 1, Clip 4 of 4 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "To follow that path, our team spent months digging through records and rebuilding each helmet in 3D, piece by piece."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A long dark worn wooden table holds a chronological row of helmets fading into darkness: a dented hammered-copper Sumerian helmet, a bronze Corinthian helmet, an iron Roman helmet, a medieval great helm, a WWI steel helmet and a modern matte-tan composite combat helmet with a night-vision mount, each in its own soft pool of light. Camera and motion: Slow crane up and back to reveal the whole row from above, faint dust drifting through the pools of light. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 2 (0:25, ~27s, 4 clips)

Shot 2, Clip 1 of 4 (Frames to Video, shot image as first frame; covers ~7s of narration)

[Script Segment] "It starts in ancient Mesopotamia, around 2500 BC. Sumerian soldiers marching in tight formations wore helmets of beaten copper"

> **Video Prompt:** 8-second shot. Scene: A dim ancient Sumerian tomb chamber of mud brick around 2500 BC: a hammered-copper soldier's helmet over a padded leather cap rests on a low ledge, and beyond it a golden ceremonial helmet engraved with wavy hair and a tied knot sits half-buried in dry earth, a single shaft of dusty light falling on the gold. Camera and motion: Slow push past the copper helmet on the ledge, holding it in soft focus in the foreground. Ambient: thin atmospheric haze drifts slowly through the backlight. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: ancient, sacred, mysterious. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 2, Clip 2 of 4 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "over padded leather caps. The idea was simple. Put something hard between the skull and the weapon."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dim ancient Sumerian tomb chamber of mud brick around 2500 BC: a hammered-copper soldier's helmet over a padded leather cap rests on a low ledge, and beyond it a golden ceremonial helmet engraved with wavy hair and a tied knot sits half-buried in dry earth, a single shaft of dusty light falling

> on the gold. Camera and motion: Gentle orbit around the copper helmet, revealing the padded leather cap edge beneath its rim. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 2, Clip 3 of 4 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "For rulers, the same idea became a symbol. One Sumerian ruler was buried with a helmet of solid gold,"

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dim ancient Sumerian tomb chamber of mud brick around 2500 BC: a hammered-copper soldier's helmet over a padded leather cap rests on a low ledge, and beyond it a golden ceremonial helmet engraved with wavy hair and a tied knot sits half-buried in dry earth, a single shaft of dusty light falling on the gold. Camera and motion: Rack focus from the copper helmet to the golden helmet glowing in the shaft of light behind it, dust drifting through the beam. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 2, Clip 4 of 4 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "shaped to imitate hair tied up in a knot. It was never meant to be hit. It was meant to be seen."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dim ancient Sumerian tomb chamber of mud brick around 2500 BC: a hammered-copper soldier's helmet over a padded leather cap rests on a low ledge, and beyond it a golden ceremonial helmet engraved with wavy hair and a tied knot sits half-buried in dry earth, a single shaft of dusty light falling on the gold. Camera and motion: Slow push-in on the golden helmet's engraved hair and tied knot, the light shaft shimmering. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 3 (0:52, ~23s, 3 clips)

Shot 3, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "But copper had a weakness. It was soft. A heavy strike could dent it deep enough to injure the man beneath it."

> **Video Prompt:** 8-second shot. Scene: A dark ancient workshop: on the left a copper helmet with a deep fresh dent in its crown, on the right a glowing clay crucible of molten bronze with reddish copper nuggets and silvery tin ingots beside it, and a freshly polished golden-brown bronze helmet catching the firelight. Camera and motion: Slow push-in on the deep fresh dent in the copper helmet's crown, a few metal flakes settling. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: transformative, discovery. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint

> haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 3, Clip 2 of 3 (Extend the previous clip; covers ~9s of narration)

[Script Segment] "The answer arrived with the Bronze Age. By mixing copper with a small amount of tin, metalworkers created an alloy far harder than either metal alone."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark ancient workshop: on the left a copper helmet with a deep fresh dent in its crown, on the right a glowing clay crucible of molten bronze with reddish copper nuggets and silvery tin ingots beside it, and a freshly polished golden-brown bronze helmet catching the firelight. Camera and motion: Slow lateral slide to the glowing crucible as molten bronze ripples and sparks rise, tin ingots beside it. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 3, Clip 3 of 3 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "Bronze held its shape, resisted cutting, and could be polished to a shine that unsettled anyone facing it."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark ancient workshop: on the left a copper helmet with a deep fresh dent in its crown, on the right a glowing clay crucible of molten bronze with reddish copper nuggets and silvery tin ingots beside it, and a freshly polished golden-brown bronze helmet catching the firelight. Camera and motion: Slow orbit around the polished bronze helmet as a sharp light flare rolls across its dome. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 4 (1:15, ~14s, 2 clips)

Shot 4, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "By the 7th century BC, Greek armorers had pushed bronze to its limit. They created the Corinthian helmet."

> **Video Prompt:** 8-second shot. Scene: A gleaming bronze Greek Corinthian helmet from the 7th century BC with almond-shaped eye openings, a long nose guard and a narrow mouth gap, standing on a dark wooden stand in a dim armorer's workshop. Camera and motion: Slow rise from below to eye level as light grows across the bronze Corinthian helmet. Ambient: faint haze drifts in the darkness and specular highlights slide subtly across the metal as the view shifts. Lighting: single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges. Mood: iconic, heroic. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 4, Clip 2 of 2 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "Hammered from a single sheet of metal, it wrapped the entire head and face, leaving only narrow openings for the eyes and mouth."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A gleaming bronze Greek Corinthian helmet from the 7th century BC with almond-shaped eye openings, a long nose guard and a narrow mouth gap, standing on a dark wooden stand in a dim armorer's workshop. Camera and motion: Gentle push-in toward the narrow almond-shaped eye openings until darkness inside them fills the centre of the frame. Ambient: faint haze drifts in the darkness and specular highlights slide subtly across the metal as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 5 (1:29, ~14s, 2 clips)

Shot 5, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "Making one took enormous skill. The smith had to stretch the bronze thin enough to wear,"

> **Video Prompt:** 8-second shot. Scene: An ancient Greek armorer's anvil in a dark workshop: a half-finished bronze Corinthian helmet shell on a curved anvil horn, small hammers and stakes around it, and beside it a torn, split bronze sheet ruined by a single mistake. Camera and motion: Slow push along the anvil toward the half-finished bronze helmet shell, tiny sparks drifting in the forge glow. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: painstaking craft, fragile. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 5, Clip 2 of 2 (Extend the previous clip; covers ~9s of narration)

[Script Segment] "yet keep it thick across the brow and crown, where blows landed most. A single mistake could tear the sheet and ruin weeks of work."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: An ancient Greek armorer's anvil in a dark workshop: a half-finished bronze Corinthian helmet shell on a curved anvil horn, small hammers and stakes around it, and beside it a torn, split bronze sheet ruined by a single mistake. Camera and motion: Slow slide to the torn bronze sheet beside it, ending close on its jagged tear. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 6 (1:43, ~18s, 3 clips)

Shot 6, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~7s of narration)

[Script Segment] "It was superb protection. And that was exactly the problem. A soldier inside a Corinthian helmet could barely hear orders"

> **Video Prompt:** 8-second shot. Scene: First-person view from inside a bronze Corinthian helmet, looking out through its narrow eye slits at a blurred dusty ancient Greek battlefield of spears, the frame edges blocked by dark bronze. Camera and motion: Static first-person view through the eye slits, the distant battlefield blurred and slightly muffled, dust drifting. Ambient: thin atmospheric haze drifts slowly through the backlight. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: claustrophobic, isolated. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 6, Clip 2 of 3 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "and could see almost nothing to his sides. So over the next few centuries, Greek designs slowly opened up."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: First-person view from inside a bronze Corinthian helmet, looking out through its narrow eye slits at a blurred dusty ancient Greek battlefield of spears, the frame edges blocked by dark bronze. Camera and motion: Slow head-turn to the left revealing only dark bronze blocking the side view, then back to the narrow strip ahead. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 6, Clip 3 of 3 (Extend the previous clip; covers ~4s of narration)

[Script Segment] "Cheek pieces became hinged. Ear openings appeared. Protection was traded for awareness."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: First-person view from inside a bronze Corinthian helmet, looking out through its narrow eye slits at a blurred dusty ancient Greek battlefield of spears, the frame edges blocked by dark bronze. Camera and motion: Slow pull back out of the helmet so the eye slits shrink and the dark bronze rim comes into view. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 7 (2:01, ~21s, 3 clips)

Shot 7, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "Then came Rome. And Rome faced a different problem entirely. Scale. Hand-shaping a full-face helmet took a skilled craftsman days of work."

> **Video Prompt:** 8-second shot. Scene: A vast dark stone Roman armory with endless rows of identical plain bronze Montefortino helmets with top knobs, small neck guards and cheek pieces, lined up on wooden racks into the darkness. Camera and motion: Slow push into the dark armory as pools of light reveal the first racks of helmets. Ambient: fine dust motes float slowly through the pools of light. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: imperial, massive scale. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no

> camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 7, Clip 2 of 3 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "Rome needed to equip hundreds of thousands of men. So its legions adopted a simpler design borrowed from the Celts, the Montefortino."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A vast dark stone Roman armory with endless rows of identical plain bronze Montefortino helmets with top knobs, small neck guards and cheek pieces, lined up on wooden racks into the darkness. Camera and motion: Steady glide down the central aisle between endless racks of identical Montefortino helmets. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 7, Clip 3 of 3 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "A plain rounded bowl with a small neck guard and cheek pieces. Fast to make. Easy to repair."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A vast dark stone Roman armory with endless rows of identical plain bronze Montefortino helmets with top knobs, small neck guards and cheek pieces, lined up on wooden racks into the darkness. Camera and motion: Slow push-in on one Montefortino helmet in the foreground, showing its rounded bowl, small neck guard and cheek pieces. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 8 (2:22, ~8s, 1 clip)

Shot 8, Clip 1 of 1 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "These helmets were handed down from soldier to soldier, and some survive today with several different owners' names punched into the metal."

> **Video Prompt:** 8-second shot. Scene: Extreme close-up of the neck guard of a worn ancient bronze Roman Montefortino helmet, rows of dotted punched Latin letters from several different owners, green patina in the grooves. Camera and motion: Very slow pan along the punched Latin letters on the neck guard with a gentle focus pull from one owner's name to the next. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: personal, haunting. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 9 (2:30, ~15s, 2 clips)

Shot 9, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "Over time, Roman workshops shifted from bronze to iron. Iron was cheaper and far more plentiful. And with it came the Imperial Gallic helmet,"

> **Video Prompt:** 8-second shot. Scene: A polished iron Roman Imperial Gallic helmet with brass decorations, a reinforced brow ridge across the front and a wide flared neck guard, on a dark stand beside a forge bench with glowing coals and a duller bronze helmet behind it. Camera and motion: Slow push from the duller bronze helmet to the polished iron Imperial Gallic helmet as forge light flickers on the iron. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: powerful, imperial. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 9, Clip 2 of 2 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "with a reinforced brow ridge to stop downward blows and a wide flared guard protecting the back of the neck."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A polished iron Roman Imperial Gallic helmet with brass decorations, a reinforced brow ridge across the front and a wide flared neck guard, on a dark stand beside a forge bench with glowing coals and a duller bronze helmet behind it. Camera and motion: Slow orbit from the reinforced brow ridge at the front around to the wide flared neck guard at the back. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 10 (2:45, ~22s, 3 clips)

Shot 10, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "When the Western Empire collapsed, so did its workshops. Without large-scale industry, smiths turned to a design that needed less skill, the spangenhelm."

> **Video Prompt:** 8-second shot. Scene: An abandoned Roman armory in ruins with collapsed roof beams and dust, and in the foreground on a broken bench an early medieval spangenhelm: a frame of iron strips with riveted plates, one seam burst open, a plate bent inward and broken rivets scattered beside it. Camera and motion: Slow crane down through falling dust from the broken roof of the ruined armory toward the spangenhelm on the bench. Ambient: thin atmospheric haze drifts slowly through the backlight. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: decline, fragile, grim. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 10, Clip 2 of 3 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "Instead of one solid bowl, it used a frame of iron strips with plates riveted between them."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: An abandoned Roman armory in ruins with collapsed roof beams and dust, and in the foreground on a broken bench an early medieval spangenhelm: a frame of iron strips with riveted plates, one seam burst open, a plate bent inward and broken rivets scattered beside it. Camera and motion: Slow orbit around

> the spangenhelm showing its iron frame strips and riveted plates. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 10, Clip 3 of 3 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "It was easy to build. But every seam was a weak point. A hard enough blow could split a joint and drive straight through."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: An abandoned Roman armory in ruins with collapsed roof beams and dust, and in the foreground on a broken bench an early medieval spangenhelm: a frame of iron strips with riveted plates, one seam burst open, a plate bent inward and broken rivets scattered beside it. Camera and motion: Slow push-in on the burst seam and bent plate as a loose rivet rolls to a stop. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 11 (3:07, ~21s, 3 clips)

Shot 11, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "By the 11th century, smiths had relearned how to raise a helmet from a single piece of iron."

> **Video Prompt:** 8-second shot. Scene: A conical Norman nasal helmet from the 11th century, raised from a single piece of iron with one narrow bar running down over the nose, on a featureless matte-grey display mannequin head in a dark medieval forge, bodkin arrows stuck in muddy ground beside it. Camera and motion: Slow push toward the conical Norman nasal helmet as forge light flickers across the iron. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: austere, vulnerable. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 11, Clip 2 of 3 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "The result was the Norman nasal helmet. A conical shell that deflected blows, with one narrow bar running down over the nose."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A conical Norman nasal helmet from the 11th century, raised from a single piece of iron with one narrow bar running down over the nose, on a featureless matte-grey display mannequin head in a dark medieval forge, bodkin arrows stuck in muddy ground beside it. Camera and motion: Slow orbit from the side profile of the conical shell to a frontal view of the narrow nose bar. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth,

> cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 11, Clip 3 of 3 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "Yet the rest of the face remained completely exposed. And on medieval battlefields, arrows and blades went looking for exactly that."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A conical Norman nasal helmet from the 11th century, raised from a single piece of iron with one narrow bar running down over the nose, on a featureless matte-grey display mannequin head in a dark medieval forge, bodkin arrows stuck in muddy ground beside it. Camera and motion: Slow pull back revealing the bare face area of the mannequin and the bodkin arrows in the mud, smoke drifting low. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 12 (3:28, ~19s, 3 clips)

Shot 12, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~5s of narration)

[Script Segment] "So armorers decided to cover everything. In the late 12th century, the great helm appeared."

> **Video Prompt:** 8-second shot. Scene: A flat-topped steel medieval great helm from the late 12th century with narrow eye slits and breathing holes on a dark stand, and behind it a row of heater shields with distinct painted heraldic coats of arms leaning against a dark stone wall. Camera and motion: Slow rise from darkness as light comes up on the flat-topped great helm. Ambient: fine dust motes float slowly through the pools of light. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: imposing, pageantry. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 12, Clip 2 of 3 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "A flat-topped steel cylinder that enclosed the entire head. For the first time since the Greeks, a soldier's face vanished behind metal."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A flat-topped steel medieval great helm from the late 12th century with narrow eye slits and breathing holes on a dark stand, and behind it a row of heater shields with distinct painted heraldic coats of arms leaning against a dark stone wall. Camera and motion: Slow push-in toward the great helm's narrow eye slit until it fills the frame. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 12, Clip 3 of 3 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "Knights began painting coats of arms on their shields and surcoats, simply so they could be recognized."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A flat-topped steel medieval great helm from the late 12th century with narrow eye slits and breathing holes on a dark stand, and behind it a row of heater shields with distinct painted heraldic coats of arms leaning against a dark stone wall. Camera and motion: Rack focus from the great helm to the row of painted heraldic shields behind it, the camera drifting sideways. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 13 (3:46, ~17s, 3 clips)

Shot 13, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~5s of narration)

[Script Segment] "But the flat top had a fatal flaw. It met every overhead strike head-on,"

> **Video Prompt:** 8-second shot. Scene: Two medieval helmets on a dark table: a flat-topped great helm with a dent in its crown and a pointed sugarloaf helm, a heavy sword blade glancing off the sugarloaf's pointed crown with a streak of sparks trailing along the curve. Camera and motion: A heavy sword descends in slow motion toward the dented flat top of the great helm in the background. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: tense, then satisfying. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 13, Clip 2 of 3 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "absorbing the full force instead of turning it aside. So armorers raised the crown into a point."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: Two medieval helmets on a dark table: a flat-topped great helm with a dent in its crown and a pointed sugarloaf helm, a heavy sword blade glancing off the sugarloaf's pointed crown with a streak of sparks trailing along the curve. Camera and motion: Slow pan from the dented flat-topped helm to the pointed sugarloaf helm. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 13, Clip 3 of 3 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "This was the sugarloaf helm, and it did what flat steel could not. It made blades slide off."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: Two medieval helmets on a dark table: a flat-topped great helm with a dent in its crown and a pointed sugarloaf helm, a heavy sword blade glancing off the sugarloaf's pointed crown with a streak of sparks

> trailing along the curve. Camera and motion: The sword glances off the pointed crown in slow motion, a streak of sparks trailing along the curve. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 14 (4:03, ~15s, 2 clips)

Shot 14, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~7s of narration)

[Script Segment] "Underneath all that steel, knights wore something just as important. A padded arming cap and a hood of mail."

> **Video Prompt:** 8-second shot. Scene: A cutaway cross-section on a dark table of a medieval great helm worn over a chainmail coif and a quilted linen arming cap on a featureless matte-grey mannequin head, every mail ring and stitch visible, a modern helmet foam pad resting beside it in the same pool of light. Camera and motion: Slow pan across the cutaway from the steel shell inward through the chainmail rings to the quilted padding. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: insightful, full-circle. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 14, Clip 2 of 2 (Extend the previous clip; covers ~9s of narration)

[Script Segment] "The metal stopped the edge. The padding softened the shock. It was a lesson armies would forget, and then have to learn all over again."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A cutaway cross-section on a dark table of a medieval great helm worn over a chainmail coif and a quilted linen arming cap on a featureless matte-grey mannequin head, every mail ring and stitch visible, a modern helmet foam pad resting beside it in the same pool of light. Camera and motion: Slow rack focus from the old quilted padding to the modern foam pad resting beside it. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 15 (4:18, ~22s, 3 clips)

Shot 15, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "Vision and airflow were still a struggle. In the 14th century, the bascinet introduced a clever fix."

> **Video Prompt:** 8-second shot. Scene: A 14th-century steel hounskull bascinet with a long pointed beak-shaped visor full of breathing holes on a dark stand, the visor mounted on side pivot pins, blurred arrows streaking through the dark background. Camera and motion: Slow push toward the closed hounskull bascinet on its stand, haze drifting in the backlight. Ambient: thin atmospheric haze drifts slowly through the backlight. Lighting: soft backlight creating a thin glowing rim around the silhouette,

> front mostly in shadow. Mood: clever, menacing. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 15, Clip 2 of 3 (Extend the previous clip; covers ~10s of narration)

[Script Segment] "A visor mounted on pivots. Raise it to breathe and look around. Lower it when the arrows started flying. Some visors were drawn out into a sharp point,"

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A 14th-century steel hounskull bascinet with a long pointed beak-shaped visor full of breathing holes on a dark stand, the visor mounted on side pivot pins, blurred arrows streaking through the dark background. Camera and motion: The pointed visor slowly rises on its side pivots, holds, then lowers and closes as blurred arrows streak past. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 15, Clip 3 of 3 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "earning the nickname hounskull, or dog's face. That beak shape gave lances and arrows nothing flat to bite into."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A 14th-century steel hounskull bascinet with a long pointed beak-shaped visor full of breathing holes on a dark stand, the visor mounted on side pivot pins, blurred arrows streaking through the dark background. Camera and motion: Slow orbit to the profile of the beak-shaped visor as an arrow glances off its slope in slow motion. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 16 (4:41, ~26s, 4 clips)

Shot 16, Clip 1 of 4 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "By the 1400s, helmets like the armet fitted the head so closely that they moved with the wearer."

> **Video Prompt:** 8-second shot. Scene: A dark museum gallery: a polished 15th-century steel armet helmet with close-fitting cheek plates on a pedestal in a single spotlight, and on the table in front of it a flintlock musket, a powder horn, a small pile of black gunpowder and a flattened lead musket ball. Camera and motion: Slow orbit around the gleaming armet on its pedestal in the spotlight. Ambient: fine dust motes float slowly through the pools of light. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: peak, then ominous turn. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 16, Clip 2 of 4 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "Medieval head protection had reached its peak. Then, gunpowder arrived on the battlefield. As firearms grew more powerful,"

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark museum gallery: a polished 15th-century steel armet helmet with close-fitting cheek plates on a pedestal in a single spotlight, and on the table in front of it a flintlock musket, a powder horn, a small pile of black gunpowder and a flattened lead musket ball. Camera and motion: Slow pull back revealing the flintlock musket and gunpowder in the foreground as the spotlight on the armet begins to dim. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 16, Clip 3 of 4 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "armor thick enough to stop a musket ball became too heavy to fight in. Little by little, soldiers abandoned it."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark museum gallery: a polished 15th-century steel armet helmet with close-fitting cheek plates on a pedestal in a single spotlight, and on the table in front of it a flintlock musket, a powder horn, a small pile of black gunpowder and a flattened lead musket ball. Camera and motion: Slow push-in on the flattened lead musket ball as a match flare lights the pile of gunpowder. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 16, Clip 4 of 4 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "By the 18th century, most infantry marched into battle wearing felt, cloth, and leather. Helmets survived mostly as decoration."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark museum gallery: a polished 15th-century steel armet helmet with close-fitting cheek plates on a pedestal in a single spotlight, and on the table in front of it a flintlock musket, a powder horn, a small pile of black gunpowder and a flattened lead musket ball. Camera and motion: Slow pull back as the armet sinks into darkness, smoke drifting across the table. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 17 (5:06, ~21s, 3 clips)

Shot 17, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "There were exceptions. Heavy cavalry, like Napoleon's cuirassiers, kept their steel helmets and breastplates well into the 1800s."

> **Video Prompt:** 8-second shot. Scene: A dark table with a Napoleonic French cuirassier steel helmet with brass crest and horsehair mane, a simple cloth infantry cap, and a black leather Prussian Pickelhaube with brass spike and eagle plate, with a brass WWI artillery shell standing upright at the

> end of the row in a harsh spotlight. Camera and motion: Slow lateral slide along the row, starting on the Napoleonic cuirassier helmet with its brass crest and horsehair mane. Ambient: fine dust motes float slowly through the pools of light. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: proud, then ominous. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 17, Clip 2 of 3 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "But for the common foot soldier, the helmet had all but disappeared. Prussia's famous spiked Pickelhaube of 1842 was made of hardened leather."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark table with a Napoleonic French cuirassier steel helmet with brass crest and horsehair mane, a simple cloth infantry cap, and a black leather Prussian Pickelhaube with brass spike and eagle plate, with a brass WWI artillery shell standing upright at the end of the row in a harsh spotlight. Camera and motion: Continue the slide past the simple cloth cap to the black leather Pickelhaube with its brass spike. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 17, Clip 3 of 3 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "It looked impressive, but it offered almost no protection. For nearly two hundred years, that seemed acceptable. Until 1914."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark table with a Napoleonic French cuirassier steel helmet with brass crest and horsehair mane, a simple cloth infantry cap, and a black leather Prussian Pickelhaube with brass spike and eagle plate, with a brass WWI artillery shell standing upright at the end of the row in a harsh spotlight. Camera and motion: Continue to the brass artillery shell at the end of the row as the light hardens and the camera stops dead. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 18 (5:27, ~15s, 2 clips)

Shot 18, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "The First World War was dominated by artillery. Shells burst above the trenches, raining hot metal fragments down on the men below."

> **Video Prompt:** 8-second shot. Scene: An empty WWI trench at night under an exploding airburst artillery shell, glowing jagged metal fragments raining down onto wet sandbags, a soft wool cloth cap lying in the mud below the parapet, barbed wire silhouettes beyond. Camera and motion: Fragments from the airburst shell rain down in slow motion over the empty trench, smoke drifting. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: terrifying, vulnerable. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed

> surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 18, Clip 2 of 2 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "A soldier only had to raise his head above the parapet to be struck. And most of them were wearing fabric caps."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: An empty WWI trench at night under an exploding airburst artillery shell, glowing jagged metal fragments raining down onto wet sandbags, a soft wool cloth cap lying in the mud below the parapet, barbed wire silhouettes beyond. Camera and motion: Slow tilt down from the burst to the soft cloth cap lying in the mud below the parapet. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 19 (5:42, ~24s, 3 clips)

Shot 19, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~9s of narration)

[Script Segment] "France reacted first. Its soldiers began receiving steel skullcaps to wear underneath their kepis. Within months, the army introduced a full steel helmet, the Adrian."

> **Video Prompt:** 8-second shot. Scene: A dark industrial workshop: a horizon-blue French Adrian helmet with its crest ridge and a khaki British Brodie helmet with a wide flat brim on a workbench, behind them a steel press stamping a flat sheet into a Brodie shape with sparks and steam, and a line of identical Brodie helmets fading into the dark. Camera and motion: Slow slide across the workbench from the horizon-blue French Adrian helmet to the khaki British Brodie helmet. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: industrial, urgent. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 19, Clip 2 of 3 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "Britain followed with the Brodie helmet. Its design was brilliant in its simplicity. It was pressed from a single sheet of manganese steel,"

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark industrial workshop: a horizon-blue French Adrian helmet with its crest ridge and a khaki British Brodie helmet with a wide flat brim on a workbench, behind them a steel press stamping a flat sheet into a Brodie shape with sparks and steam, and a line of identical Brodie helmets fading into the dark. Camera and motion: The steel press slams down in slow motion with sparks and steam as the camera eases toward it. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 19, Clip 3 of 3 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "a process fast enough to produce millions. Its wide, shallow brim shielded the head and shoulders from fragments falling from above."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dark industrial workshop: a horizon-blue French Adrian helmet with its crest ridge and a khaki British Brodie helmet with a wide flat brim on a workbench, behind them a steel press stamping a flat sheet into a Brodie shape with sparks and steam, and a line of identical Brodie helmets fading into the dark. Camera and motion: Slow glide along the line of identical Brodie helmets fading into the dark. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 20 (6:06, ~13s, 2 clips)

Shot 20, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~7s of narration)

[Script Segment] "Germany went further. In 1916, it introduced the Stahlhelm. Made of nickel steel, its deep shape extended down over the ears"

> **Video Prompt:** 8-second shot. Scene: A field-grey German M1916 Stahlhelm on a dark stand, its deep skirt flaring down over the ears and the back of the neck, against a softly glowing grey haze. Camera and motion: Slow orbit from the front of the Stahlhelm toward its side profile, showing the deep skirt over the ears. Ambient: thin atmospheric haze drifts slowly through the backlight. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: iconic, haunting. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 20, Clip 2 of 2 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "and the back of the neck. It became one of the most recognizable silhouettes of the twentieth century."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A field-grey German M1916 Stahlhelm on a dark stand, its deep skirt flaring down over the ears and the back of the neck, against a softly glowing grey haze. Camera and motion: Continue the orbit until the helmet becomes a pure black silhouette against the glowing haze. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 21 (6:20, ~15s, 2 clips)

Shot 21, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "Germany even tried to add an extra steel plate that hung from lugs on the front, meant to stop bullets at the brow."

> **Video Prompt:** 8-second shot. Scene: A German Stahlhelm with a thick extra steel brow plate hooked onto its front lugs, a flattened bullet stuck in the plate, sitting on a rusted antique balance scale that tips heavily to one side, a medieval great helm softly blurred behind. Camera and motion: Slow push-in on the heavy brow plate and the flattened bullet stuck in it. Ambient: faint haze drifts in the darkness and specular highlights slide subtly across the metal as the view shifts. Lighting: single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges. Mood: burdensome, history repeating. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 21, Clip 2 of 2 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "It worked, but it was so heavy that few soldiers wore it for long. Once again, protection had collided with weight."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A German Stahlhelm with a thick extra steel brow plate hooked onto its front lugs, a flattened bullet stuck in the plate, sitting on a rusted antique balance scale that tips heavily to one side, a medieval great helm softly blurred behind. Camera and motion: The scale slowly sinks further under the weight, then rack focus to the great helm blurred behind. Ambient: faint haze drifts in the darkness and specular highlights slide subtly across the metal as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 22 (6:35, ~12s, 2 clips)

Shot 22, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~5s of narration)

[Script Segment] "Steel helmets sharply reduced fatal head wounds. But they still had a hidden problem."

> **Video Prompt:** 8-second shot. Scene: A cutaway cross-section of a WWI steel helmet on a featureless matte-grey mannequin head, the thin liner pressed tight against the shell, a fragment impact denting the steel straight inward with faint glowing shockwave lines travelling into the head. Camera and motion: Slow push-in on the cutaway, the thin liner pressed tight against the steel shell. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: tense, technical. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 22, Clip 2 of 2 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "When a fragment hit, the shell pressed directly against the skull, passing much of the impact straight into the wearer."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A cutaway cross-section of a WWI steel helmet on a featureless matte-grey mannequin head, the thin liner pressed tight against the shell, a fragment impact denting the steel straight inward with faint glowing shockwave lines travelling into the head. Camera and motion: A fragment strikes in slow

> motion, the steel dents straight inward and faint glowing shockwave lines pulse into the head. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 23 (6:46, ~19s, 3 clips)

Shot 23, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~7s of narration)

[Script Segment] "In 1941, the United States answered this with the M1 helmet. It used two separate parts. An outer steel shell,"

> **Video Prompt:** 8-second shot. Scene: A cutaway cross-section of an olive-drab US M1 helmet on a featureless matte-grey mannequin head, showing the outer steel shell, the separate inner liner and the cotton webbing straps holding a clear gap between steel and head. Camera and motion: Slow orbit around the cutaway M1, showing the outer steel shell. Ambient: faint haze drifts in the darkness and specular highlights slide subtly across the metal as the view shifts. Lighting: single soft key light from upper left, steep falloff into near-black, crisp rim highlights on metal edges. Mood: clever, relieved. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 23, Clip 2 of 3 (Extend the previous clip; covers ~4s of narration)

[Script Segment] "and a lighter liner inside it with an adjustable web of straps."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A cutaway cross-section of an olive-drab US M1 helmet on a featureless matte-grey mannequin head, showing the outer steel shell, the separate inner liner and the cotton webbing straps holding a clear gap between steel and head. Camera and motion: Slow push-in on the separate liner and its cotton webbing straps holding the gap. Ambient: faint haze drifts in the darkness and specular highlights slide subtly across the metal as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 23, Clip 3 of 3 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "That gap between steel and skull became a crumple zone. The shell could take a dent without the dent reaching the head."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A cutaway cross-section of an olive-drab US M1 helmet on a featureless matte-grey mannequin head, showing the outer steel shell, the separate inner liner and the cotton webbing straps holding a clear gap between steel and head. Camera and motion: The shell takes a dent in slow motion and the dent stops short inside the gap as the webbing flexes. Ambient: faint haze drifts in the darkness and specular highlights slide subtly across the metal as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth,

> cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 24 (7:05, ~21s, 3 clips)

Shot 24, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "Soldiers nicknamed it the steel pot, and they used it as far more than armor. It became a wash basin, a shovel, a seat,"

> **Video Prompt:** 8-second shot. Scene: A dented olive-drab M1 helmet hanging over a small campfire at night with steam rising from water inside, a folding shovel, a canteen and a shaving brush on a wooden crate beside it, and a worn scratched M1 with faded paint on a dark shelf in the background. Camera and motion: Slow push toward the M1 hanging over the campfire as steam rises and embers drift, the shovel and shaving brush on the crate beside it. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Lighting: warm flickering orange glow from a forge or flame mixed with cold grey ambient fill. Mood: human, warm, end of an era. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 24, Clip 2 of 3 (Extend the previous clip; covers ~8s of narration)

[Script Segment] "and even a cooking pot over an open fire. The M1 served for more than forty years. But steel had reached its limit."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dented olive-drab M1 helmet hanging over a small campfire at night with steam rising from water inside, a folding shovel, a canteen and a shaving brush on a wooden crate beside it, and a worn scratched M1 with faded paint on a dark shelf in the background. Camera and motion: Slow rack focus from the campfire helmet to the worn, dusty M1 on the shelf behind. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 24, Clip 3 of 3 (Extend the previous clip; covers ~5s of narration)

[Script Segment] "To make it stronger, you had to make it thicker. And thicker meant heavier."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dented olive-drab M1 helmet hanging over a small campfire at night with steam rising from water inside, a folding shovel, a canteen and a shaving brush on a wooden crate beside it, and a worn scratched M1 with faded paint on a dark shelf in the background. Camera and motion: Slow push-in on the faded, scratched paint of the worn M1 as dust settles. Ambient: warm firelight flickers gently across the metal and tiny embers drift upward. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 25 (7:26, ~10s, 2 clips)

Shot 25, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "The breakthrough came from a laboratory. In 1965, DuPont chemist Stephanie Kwolek discovered a synthetic fiber"

> **Video Prompt:** 8-second shot. Scene: A dim 1960s chemistry laboratory bench with glass beakers and flasks under a single desk lamp, a thin golden synthetic fiber being drawn up out of a beaker of cloudy liquid, a spool of tightly woven golden-yellow Kevlar fabric beside it. Camera and motion: Slow glide along the dim laboratory bench under the desk lamp as the golden fiber lifts out of the beaker. Ambient: fine dust motes float slowly through the pools of light. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: breakthrough, discovery. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 25, Clip 2 of 2 (Extend the previous clip; covers ~5s of narration)

[Script Segment] "that, weight for weight, was five times stronger than steel. It was called Kevlar."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A dim 1960s chemistry laboratory bench with glass beakers and flasks under a single desk lamp, a thin golden synthetic fiber being drawn up out of a beaker of cloudy liquid, a spool of tightly woven golden-yellow Kevlar fabric beside it. Camera and motion: Slow push from the golden fiber to the spool of woven Kevlar fabric beside it. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 26 (7:36, ~18s, 3 clips)

Shot 26, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~7s of narration)

[Script Segment] "In the early 1980s, the US Army adopted the PASGT helmet, built from layers of Kevlar bonded together with resin."

> **Video Prompt:** 8-second shot. Scene: A woodland-camouflage US PASGT helmet on a dark stand beside an exploded view of golden Kevlar fabric layers fusing together with glossy resin, a jagged metal fragment caught in the stretched woven fibers like a net. Camera and motion: Slow orbit around the camouflaged PASGT helmet on its stand, the Kevlar layers glowing faintly beside it. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Lighting: low raking side light from the right, long soft shadows, specular glints along edges. Mood: engineered, impressive. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 26, Clip 2 of 3 (Extend the previous clip; covers ~5s of narration)

[Script Segment] "Instead of resisting a fragment with hard metal, its fibers stretched and caught it,"

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A woodland-camouflage US PASGT helmet on a dark stand beside an exploded view of golden Kevlar fabric layers fusing together with glossy resin, a jagged metal fragment caught in the stretched woven fibers like a net. Camera and motion: A jagged fragment pushes into the Kevlar weave in slow motion and the fibers stretch and hold it. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 26, Clip 3 of 3 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "spreading the energy across the entire shell. For roughly the same weight as steel, it stopped far more."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A woodland-camouflage US PASGT helmet on a dark stand beside an exploded view of golden Kevlar fabric layers fusing together with glossy resin, a jagged metal fragment caught in the stretched woven fibers like a net. Camera and motion: Glowing energy ripples outward across the Kevlar layers as the camera eases back to the helmet. Ambient: faint haze drifts in the darkness and the raking light glints softly along the edges as the view shifts. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 27 (7:54, ~14s, 2 clips)

Shot 27, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~9s of narration)

[Script Segment] "Its shape looked familiar. The deep sides covering the ears and neck echoed the German Stahlhelm so closely that American troops nicknamed it the Fritz."

> **Video Prompt:** 8-second shot. Scene: A field-grey 1916 German Stahlhelm and a 1980s US PASGT helmet facing the same way side by side on a long dark table, in exact side profile, their silhouettes nearly identical, dust drifting between them. Camera and motion: Slow lateral slide between the two helmets until their side-profile silhouettes overlap and line up. Ambient: thin atmospheric haze drifts slowly through the backlight. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: surprising echo, reflective. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 27, Clip 2 of 2 (Extend the previous clip; covers ~6s of narration)

[Script Segment] "Nearly seventy years later, the best answer to falling fragments still looked like a design from 1916."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A field-grey 1916 German Stahlhelm and a 1980s US PASGT helmet facing the same way side by side on a long dark table, in exact side profile, their silhouettes nearly identical, dust drifting between them. Camera and motion: Slow slide back so the silhouettes separate again, dust drifting between them. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn

> wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 28 (8:09, ~23s, 3 clips)

Shot 28, Clip 1 of 3 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "But modern wars revealed a new threat. In Iraq and Afghanistan, many head injuries came not from penetration,"

> **Video Prompt:** 8-second shot. Scene: A modern high-cut desert-tan combat helmet resting on sandbags at dusk in an arid landscape, beside a cutaway of it on a featureless matte-grey mannequin head showing shock-absorbing foam pads inside and a tactical over-ear headset fitted below the raised edges. Camera and motion: Slow push toward the desert-tan helmet resting on sandbags as dust drifts across the dusk sky. Ambient: thin atmospheric haze drifts slowly through the backlight. Lighting: soft backlight creating a thin glowing rim around the silhouette, front mostly in shadow. Mood: harsh, then reassuring. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 28, Clip 2 of 3 (Extend the previous clip; covers ~9s of narration)

[Script Segment] "but from blast and blunt force. The old strap suspension wasn't enough. The answer was padding. Newer helmets replaced the web of straps with shock-absorbing foam pads,"

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A modern high-cut desert-tan combat helmet resting on sandbags at dusk in an arid landscape, beside a cutaway of it on a featureless matte-grey mannequin head showing shock-absorbing foam pads inside and a tactical over-ear headset fitted below the raised edges. Camera and motion: A pressure ripple passes through the cutaway helmet and spreads evenly through the foam pads. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 28, Clip 3 of 3 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "spreading every impact across the skull. Their edges were cut higher around the ears, leaving room for radios and hearing protection."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A modern high-cut desert-tan combat helmet resting on sandbags at dusk in an arid landscape, beside a cutaway of it on a featureless matte-grey mannequin head showing shock-absorbing foam pads inside and a tactical over-ear headset fitted below the raised edges. Camera and motion: Slow orbit toward the raised edges and the tactical headset fitted below them. Ambient: thin atmospheric haze drifts slowly through the backlight. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 29 (8:32, ~12s, 2 clips)

Shot 29, Clip 1 of 2 (Frames to Video, shot image as first frame; covers ~6s of narration)

[Script Segment] "Then materials moved forward again. Ultra-high molecular weight polyethylene, a plastic so light it floats on water,"

> **Video Prompt:** 8-second shot. Scene: A thin white ultra-high molecular weight polyethylene composite plate floating on the dark water of a glass tank under a single lamp, a sleek matte-grey modern polyethylene combat helmet resting on dark wood behind it. Camera and motion: The white polyethylene plate bobs gently on the rippling water as the camera holds at water level. Ambient: fine dust motes float slowly through the pools of light. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: surprising, advanced. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 29, Clip 2 of 2 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "yet in layered form even stronger than Kevlar. Helmets made from it are lighter, and they stop even more."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A thin white ultra-high molecular weight polyethylene composite plate floating on the dark water of a glass tank under a single lamp, a sleek matte-grey modern polyethylene combat helmet resting on dark wood behind it. Camera and motion: The camera slowly rises and racks focus to the sleek grey polyethylene helmet behind the tank. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 30 (8:44, ~26s, 4 clips)

Shot 30, Clip 1 of 4 (Frames to Video, shot image as first frame; covers ~8s of narration)

[Script Segment] "Today's combat helmet carries rails, night vision mounts, communication systems, and sensors. It looks nothing like a copper cap from ancient Sumer."

> **Video Prompt:** 8-second shot. Scene: A long dark table holding the full chronological lineup of helmets from a dented copper Sumerian cap, a bronze Corinthian, an iron Roman helmet, a split spangenhelm, a great helm and a WWI steel helmet to a fully equipped modern combat helmet with rails, night-vision mount and headset at the near end, each lit by its own light. Camera and motion: Slow orbit around the fully equipped modern helmet in the foreground, rails and night-vision mount catching the light. Ambient: fine dust motes float slowly through the pools of light. Lighting: narrow overhead spotlight forming a pool of light on the table, everything else falling into black. Mood: epic, resolved, haunting. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 30, Clip 2 of 4 (Extend the previous clip; covers ~5s of narration)

[Script Segment] "From copper to bronze, bronze to iron, iron to steel, and steel to fiber,"

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A long dark table holding the full chronological lineup of helmets from a dented copper Sumerian cap, a bronze Corinthian, an iron Roman helmet, a split spangenhelm, a great helm and a WWI steel helmet to a fully equipped modern combat helmet with rails, night-vision mount and headset at the near end, each lit by its own light. Camera and motion: Slow rack focus down the table from the modern helmet to the dented copper cap at the far end. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 30, Clip 3 of 4 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "each step began with a wound the last helmet couldn't prevent. But the logic behind it has never changed."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A long dark table holding the full chronological lineup of helmets from a dented copper Sumerian cap, a bronze Corinthian, an iron Roman helmet, a split spangenhelm, a great helm and a WWI steel helmet to a fully equipped modern combat helmet with rails, night-vision mount and headset at the near end, each lit by its own light. Camera and motion: Slow lateral slide back along the row from the oldest helmets toward the newest. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.

Shot 30, Clip 4 of 4 (Extend the previous clip; covers ~7s of narration)

[Script Segment] "Every curve, every layer, and every pad is there because, at some point in history, a helmet without it failed."

> **Video Prompt:** Continue the same shot for 8 seconds with the same objects, lighting and style. Scene: A long dark table holding the full chronological lineup of helmets from a dented copper Sumerian cap, a bronze Corinthian, an iron Roman helmet, a split spangenhelm, a great helm and a WWI steel helmet to a fully equipped modern combat helmet with rails, night-vision mount and headset at the near end, each lit by its own light. Camera and motion: The lights along the table dim one by one from the oldest helmet to the newest until only the modern helmet remains lit, the camera slowly pulling back. Ambient: fine dust motes float slowly through the pools of light. Style: photoreal 3D CGI, museum-artifact look, dark low-key lighting with steep falloff into near-black, desaturated charcoal, graphite, worn wood, aged steel and brass, faint haze, extremely detailed surfaces, shallow depth of field. Very slow, smooth, cinematic movement, no camera shake, no cuts. No people, no hands, no text, no logos; objects keep their shape except for the described action. Audio: no speech, no music.
